

Installation Docker à la main sans Vagrant :

```
apt-get update
apt install -y wget curl git vim
curl -s -o getdocker.sh https://get.docker.com
bash getdocker.sh
gpasswd -a root docker
```

docker-compose.yml

version: "3.2"

services:

#MariaDB Container

mariadb:

- image: mariadb:10.7
- container_name: mariadb
- hostname: mariadb
- volumes:
 - /var/lib/mysql:/var/lib/mysql
- env_file:
 - ./mariadb.env
- restart: always

#GLPI Container

glpi:

- image: diouxx/glpi
- container_name: glpi
- hostname: glpi
- ports:
 - "80:80"
- volumes:
 - /etc/timezone:/etc/timezone:ro
 - /etc/localtime:/etc/localtime:ro
 - /var/www/html/glpi:/var/www/html/glpi
- environment:
 - TIMEZONE=Europe/Paris
- restart: always
